## Education

Design Academy Eindhoven  
2017-2019

Information Design  
Masters of Art and Design

Technical University Eindhoven  
2014-2017

Industrial Design  
Bachelor of Science

## Experience

QOSQO  
Oirschot, NL  
2020- current

**Lead front-end developer, UX designer.**  
QOSQO is a software company that builds a product to automate data warehouse solutions. I was hired to improve the front-end of the software both in coding quality and visually. I was responsible for transforming design briefs into wireframes, UI sketches and ultimately functioning MVP modules. I continued the development of existing modules in the software. Over time, I have also streamlined the usage of Git and started to create a docker implementation for their microservice backend system.

Eventix  
Eindhoven, NL  
2018-2020

**Front-end developer and UX designer.**  
Eventix is a fast growing ticketing provider. I was hired to take over from the leaving front-end developer. I was responsible for keeping the website up to date and make improvements on their ticket shop. I have build a custom blog solution, including CMS. The focus was enabling our non-technical content editors to easily write and update the content of the blog. A CI/CD pipeline allowed the writers to push content to the live blog whenever their drafts were approved.

Freelance  
2018-current

**Web developer**  
As a freelancer I have taken on different jobs, from creating websites for major brands, to helping out designers to give their projects the digital interactions they deserve. See my website for examples.

Sports trainer  
2009-2016

**Field hockey goalie trainer**  
For many years, I have played field hockey at the highest youth level in The Netherlands. During this time I have transferred my knowledge and experience on other goalies. I was responsible for creating excercises and managing several trainers who were teaching the goalies during the training sessions.

# Skills

## Programming
